

Benjamín Esteban Rodríguez Valenzuela

DevOps Engineer

Cloud, Automation, Observability & Infrastructure

Copenhagen, Denmark | Immediate availability

b.esteban.r.v@gmail.com | GitHub | LinkedIn | Website

Profile

DevOps Engineer with hands-on experience in cloud environments, CI/CD pipelines, infrastructure automation, and monitoring solutions. Strong background in Python scripting, Linux administration, and deployment support across Azure and on-premise systems. At IBM Chile, contributed to observability platforms, workflow automation, and release improvements in enterprise environments. Known for a practical mindset, fast learning, and the ability to turn manual processes into scalable automated solutions.

Core Skills

Cloud & DevOps: Azure, CI/CD, Infrastructure as Code (IaC), Terraform, deployment pipelines

Systems: Linux (RHEL), troubleshooting, operational support

Containers & Tools: Docker, Kubernetes, OpenShift, Git, GitHub, Azure Boards

Automation: Python, scripting, process automation

Monitoring: Checkmk, alerting, observability

Practices: incident response, cross-team collaboration, continuous improvement

Professional Experience

IBM Chile

Jan 2024 – Present

DevOps / Systems Engineer / DevOps Engineer / DevOps Intern

- Managed and supported Linux-based pre-production and production environments, ensuring service availability, operational continuity, and deployment readiness.
- Contributed to CI/CD pipelines and release workflow improvements across cloud (Azure) and on-premise infrastructure, reducing deployment friction and increasing delivery reliability.
- Developed a Python-based automation solution to synchronize tickets between a client platform and Azure Boards, eliminating manual processes and improving traceability.
- Designed and implemented a monitoring platform using Checkmk covering more than 30 pre-production environments, significantly improving system visibility and incident response times.
- Built Infrastructure as Code (IaC) templates using Terraform, enabling consistent, reusable, and scalable deployments.
- Performed troubleshooting on microservices running in OpenShift, identifying deployment and configuration issues and resolving them to ensure application stability.
- Automated infrastructure analysis and operational workflows, reducing execution time from days to minutes and enabling faster troubleshooting and decision-making.
- Collaborated with cross-functional teams to resolve deployment blockers, improve environment readiness, and maintain stable platform operations under high-demand conditions.

Selected Achievements

- Implemented a monitoring solution from scratch for more than 30 pre-production environments.
- Reduced infrastructure analysis time from approximately 1 week to 5 minutes through Python automation.
- Improved deployment execution time from around 1 day to less than 1 hour in a banking environment with approval workflows.

Education

Computer Science Engineering Degree

2018 – 2023

Universidad Católica del Maule, Chile

Languages

Spanish: Native

English: Professional working proficiency (B1–B2)
